About me

Full-Stack Software Engineer with experience in developing web-based systems in the banking and finance industry. Strong background in building and optimizing scalable web applications using modern technologies. Proficient in Typescript and JavaScript frameworks including Vue.js, React.js, Next.js, and React Native, with backend expertise in Typescript, Node.js (Express.js, NestJS), Python, Golang, Java and PHP (Codeignator dan Laravel).

Experienced in real-time debugging, API integration, and database management (MySQL, PostgreSQL, AWS). Skilled in working within agile environments, collaborating with cross-functional teams, and adapting quickly to new technologies to deliver efficient and robust solutions.

Also experienced in developing internal tools and side projects such as custom Content Management Systems (CMS), admin dashboards, and RESTful APIs for enterprise use.

Education

Universitas Kristen Maranatha Bandung

Bachelor of Computer Science (S1) | Information Technology

- Graduated with a strong foundation in computer science and software engineering principles.
- Completed coursework in programming, databases, algorithms, and software development methodologies.

Bandung
2019 – 2022

Work Experience:

PT. Bank MNC Internasional, Tbk.

Senior Software Engineer | Full-Time

Jakarta
2024 – Now

- Led the migration of a legacy monolithic PHP application to a modern microservices architecture using TypeORM and Microfrontend patterns.
 - Designed and implemented a modularized approach to break down the monolithic system into independent, scalable microservices.
 - Utilized TypeORM for database management, enabling efficient data modeling and ORM-based interactions.
 - Adopted Microfrontend architecture to enhance frontend modularity and improve user experience by allowing different teams to develop and deploy frontend components independently.
- **Developed a robust modularization framework for table-based systems:**
 - Created a standardized module structure that facilitated easier maintenance and scalability of the application.
 - Implemented a clear separation of concerns between modules, ensuring each component could be developed,

- Collaborated with database architects to optimize schema design and ensure seamless integration across modules.
- Managed and optimized backend services using Node.js and Express.js:
 - Built high-performance RESTful APIs to support both internal and external integrations.
 - Implemented caching strategies (Redis) and load balancing to improve service reliability and performance.
 - Conducted regular code reviews and refactoring sessions to maintain clean, maintainable, and scalable codebases.
- Other Senior-Level Responsibilities:
 - Architecture Design: Defined and documented system architecture, ensuring adherence to best practices in scalability, security, and maintainability.
 - CI/CD Pipeline Management: Improved continuous integration and deployment processes using tools like Jenkins, GitLab CI, and Docker.
 - Performance Optimization: Conducted profiling and optimization of critical services to reduce latency and improve overall system performance.
 - Security Enhancements: Implemented security measures such as OAuth2 authentication, JWT token management, and secure API endpoints to protect sensitive data.

Technologies: Node.js, Express.js, TypeORM, Vue.js, Redis, Socket.IO, PostgreSQL, Docker, Git, Postman, Swagger, CI/CD pipelines

PT. Bank MNC Internasional, Tbk.

Jakarta
2022 – 2024

Web Developer | Full-Time

- Participated in the backend transition from PHP (Phalcon) to Node.js, focusing on API development and service decoupling.
- Built internal RESTful APIs to support communication between microservices.
- Developed a monitoring dashboard for the Room NOC using Vue.js to visualize system health and performance metrics.
- Worked closely with frontend and mobile teams to integrate backend services with user-facing applications.
- Gained hands-on experience with version control using Git, debugging tools, and API testing via Postman

HiColleagues

Jakarta
Feb 2022 –
Jul 2022

GoLang Developer Internship | Internship

- Developed RESTful APIs using Golang to support core application features.
- Designed and optimized database schemas using PostgreSQL.
- Worked on clean code architecture and implemented best practices for maintainable code.
- Integrated APIs with frontend components and ensured smooth data flow.
- Created integration tests, unit tests, and validation logic using Ozzo
- Debugged complex issues and collaborated with tech teams, front-end developers, mobile developers, and UI/UX designers.

Technologies: Golang, PostgreSQL, Gin Framework, Swagger, Git

Transcriptionist | Part-Time

- Transcribed audio files into text, converting spoken Indonesian content into written format.
- Ensured accuracy and consistency in transcriptions for use in machine learning development.
- Worked remotely, managing tasks independently while meeting deadlines.

Remote |
ChinaApr 2021 –
Aug 2021**Remote Worker Indonesia****Content Creator**

- Created educational videos using the Go programming language , covering topics from fundamentals to CRUD operations.
- Contributed to the development of learning materials for remote work initiatives.
- Collaborated with the team to produce high-quality instructional content.

Amazon Web
Services
Des 2021**Skills**

Technical Skills

- Frontend Development: Vue.js, React.js, Next.js, HTML5, CSS3, TailwindCSS, Bootstrap
- Backend Development: Node.js, Express.js, NestJS, PHP (Phalcon), Golang
- Database Management: MySQL, PostgreSQL, MongoDB, Redis
- Tools & Platforms: Git, GitHub/GitLab, Docker, Postman, Swagger, VSCode
- DevOps: CI/CD, Jenkins, Linux Server
- Other: Clean Code Architecture, RESTful APIs, Microservices, Debugging, Unit Testing, Integration Testing

Soft Skills

- Agile/Scrum
- Team Collaboration
- Problem Solving
- Technical Documentation
- Communication

Portofolio

❖adhirajasatranssejahtera.id- Landing page (Individual Projects)

This is an individual project to create a landing page for PT. Adhirajasa Trans Sejahtera (ATS) , a third-party logistics (3PL) company established in 2020 and based in Jakarta, Indonesia. The website serves as the company’s official online presence to introduce its services, showcase capabilities, and attract potential clients.

The landing page was developed using React Native , allowing for a responsive and mobile-optimized experience from the start. This approach also provides flexibility for future expansion into a hybrid mobile app if needed.

Front-end	: React Native (with support for web via React Native Web), Styled-components / Tailwind CSS <i>(depending on your implementation)</i>
Back-end	: Node.js, Express.js, JWT, MySql, AWS Cloud, Redis, Midtrans, Nodemailer.
Styling	: Styled-components / Tailwind CSS <i>(depending on your implementation)</i> .
Hosting	: Netlify
Website	: https://adhirajasatranssejahtera.id

❖ CRM Adhiratrans Sejahtera – CMS (Individual Projects)

CRM adhirajasatranssejahtera is a custom-built Content Management System (CMS) and Customer Relationship Management (CRM) platform developed for PT. Adhirajasa Trans Sejahtera (ATS). The system serves as an internal tool to manage and optimize the company's operational workflows, including logistics tracking, customer management, inventory control, invoicing, and reporting.

The CMS is accessible via <http://103.23.199.201/login> and is used by ATS employees to streamline daily operations across departments such as finance, warehouse, sales, and customer service.

Front-end	:	PHP Laravel
------------------	---	-------------

Back-end	:	Laravel.
