

PORTFOLIO

Software Engineer | Fullstack Developer

Mobile

1. Gro

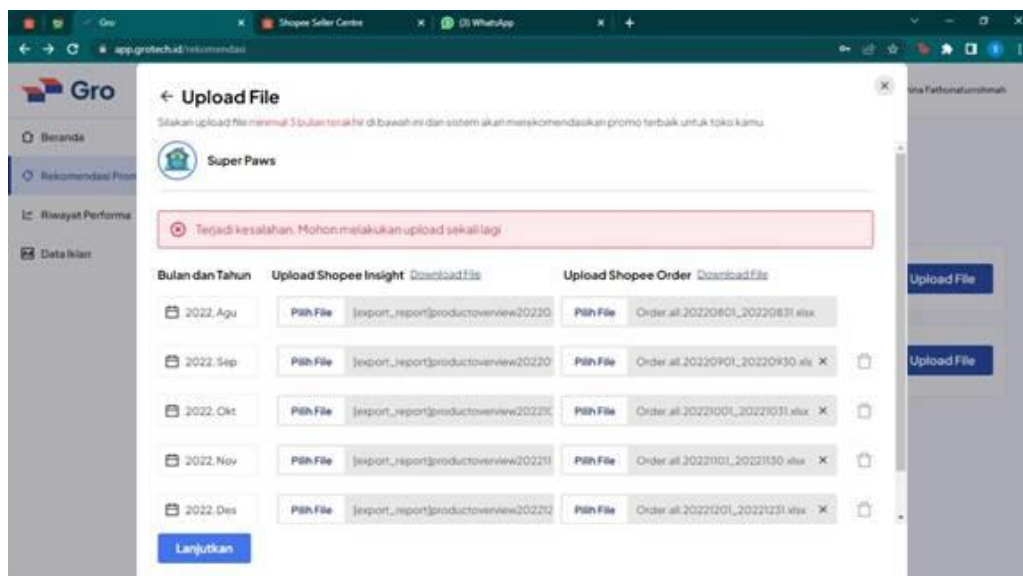

An analytics platform designed to help small and medium-sized businesses (SMEs) understand and optimize their sales performance. The system processes marketplace reports, analyzes business performance, and generates actionable recommendations through interactive dashboards.

Technology Stack

- Flutter
- Backend API Services
- Analytics Dashboard

Business Value

Empowers business owners to make data-driven decisions and improve operational performance.

2. Skincare Ingredient Scanner

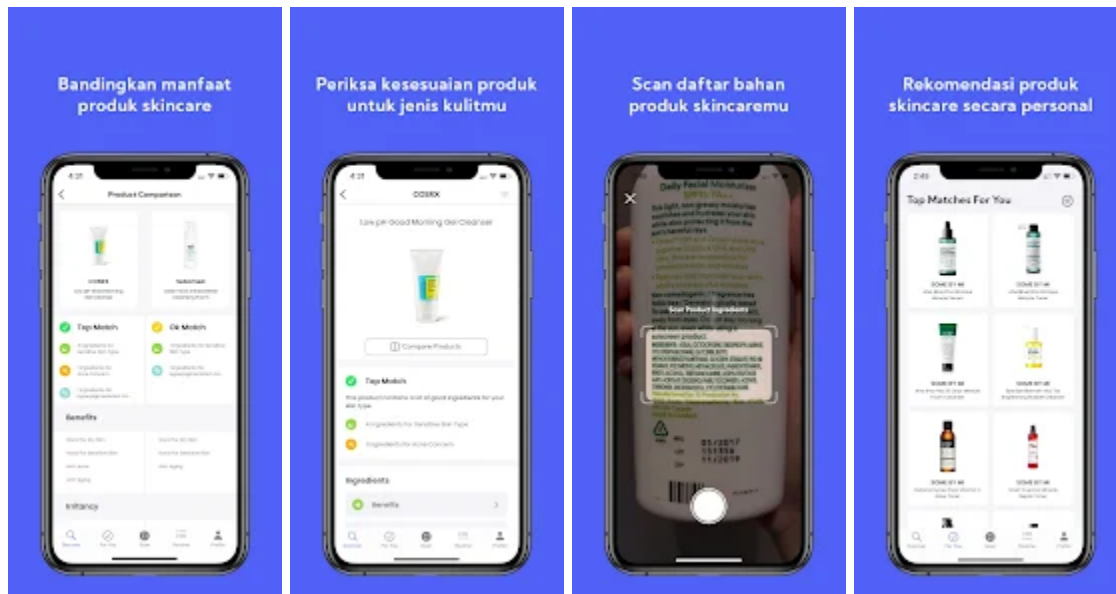

A mobile application that helps users analyze skincare products by scanning ingredients and providing detailed information regarding product composition and suitability.

Technology Stack

- Native iOS
- Flutter
- Backend API Services

Business Value

Improves consumer awareness and helps users make informed skincare decisions.

3. Sinar Baut Inventory Management Application

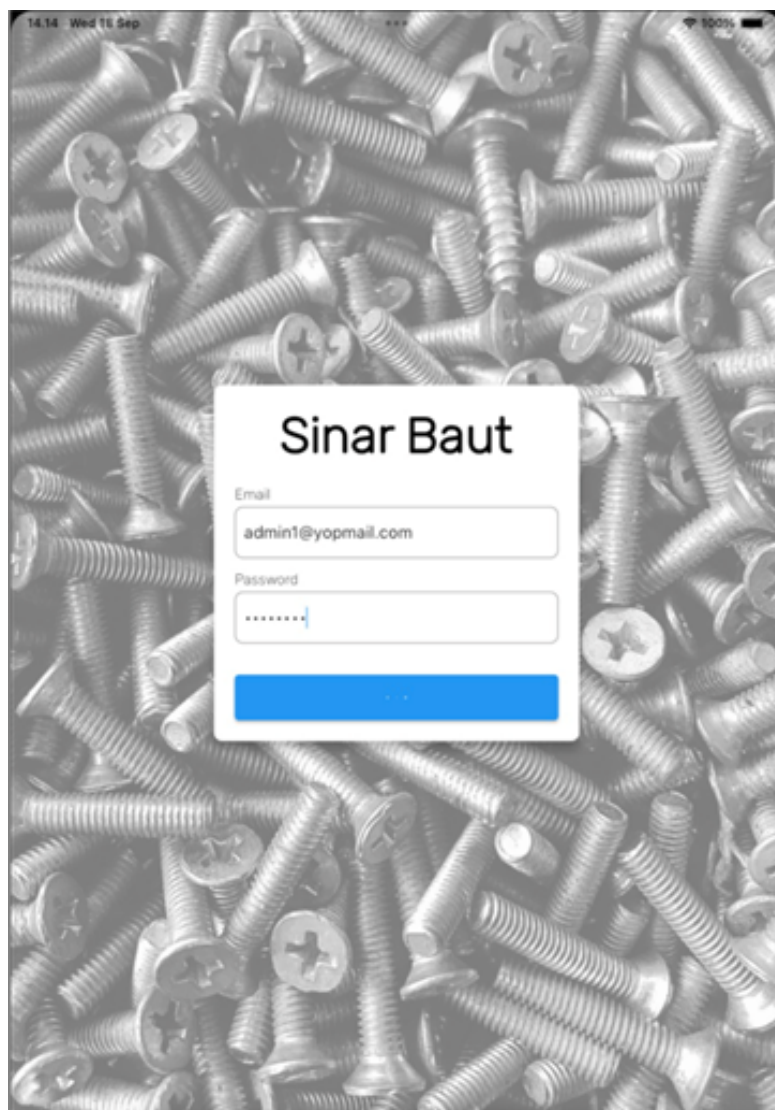

A mobile-based inventory management system designed to help businesses manage stock levels, sales transactions, and operational reporting.

Technology Stack

- Flutter
- Backend API Services

Business Value

Improves inventory accuracy and streamlines operational workflows.

4. MNC Bank Mobile Banking Features

iOS Developer

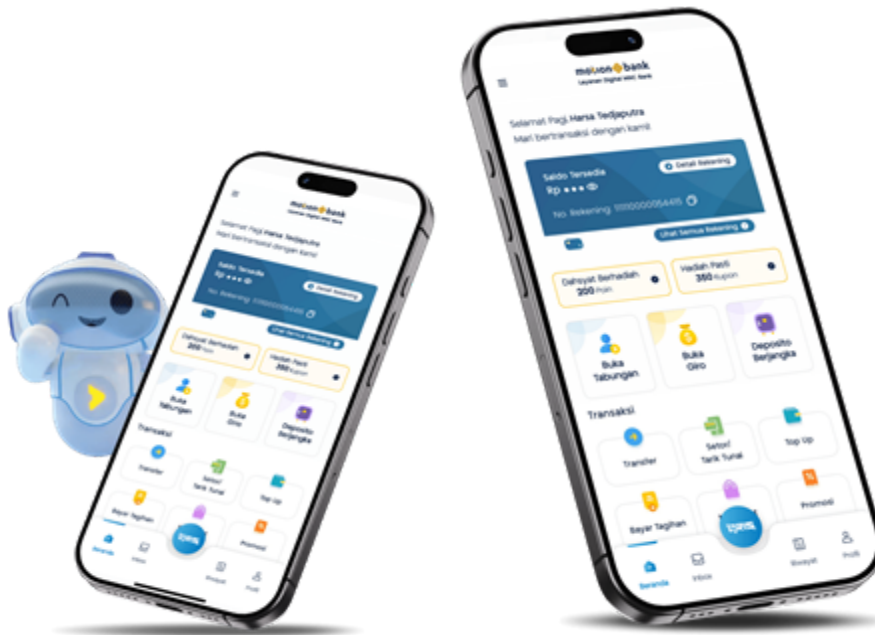

Responsible for developing and maintaining Bill Payment and Top-Up services within the MNC Bank Mobile Banking application.

Technology Stack

- Native iOS

Business Value

Enhanced customer convenience by providing seamless digital banking transactions.

Website

5. MNC Bank Content Management System (CMS)

MNC Bank CMS is an enterprise-grade internal platform that supports various operational and digital banking activities within MNC Bank. The system is used to manage content, customer onboarding processes, service configurations, transaction monitoring, reporting, and other critical business operations.

As a Software Engineer, I am responsible for developing new features, maintaining existing modules, resolving production issues, and supporting the company's transition from a monolithic architecture to a scalable microservices ecosystem.

Key Responsibilities

- Design and develop enterprise-grade CMS modules.
- Build and maintain RESTful APIs for internal and external integrations.
- Implement Audit Trail systems for operational monitoring and compliance.
- Troubleshoot and resolve production issues.
- Develop reusable components and libraries to improve development efficiency.
- Collaborate with Business Analysts, QA Engineers, Mobile Developers, and Infrastructure Teams.

Technology Stack

- TypeScript
- Node.js
- Express.js
- Vue.js
- Prisma ORM
- TiDB
- Redis
- Docker
- GitLab CI/CD

Business Impact

- Improved operational efficiency across multiple banking departments.
- Enhanced system scalability through microservices implementation.
- Increased transparency and compliance through audit trail mechanisms.
- Accelerated feature delivery using modular and reusable architecture.

6. ATS Corporate Website

The ATS Corporate Website was developed as the official online presence of PT Adhirajasa Trans Sejahtera, providing information about the company's logistics services, operational capabilities, and business profile.

The platform is fully responsive and optimized for both desktop and mobile devices, ensuring a seamless user experience across all screen sizes.

Website

<https://adhirajasatranssejahtera.id/>

Responsibilities

- UI/UX implementation.
- Frontend and backend development.
- API integration.
- Deployment and maintenance.

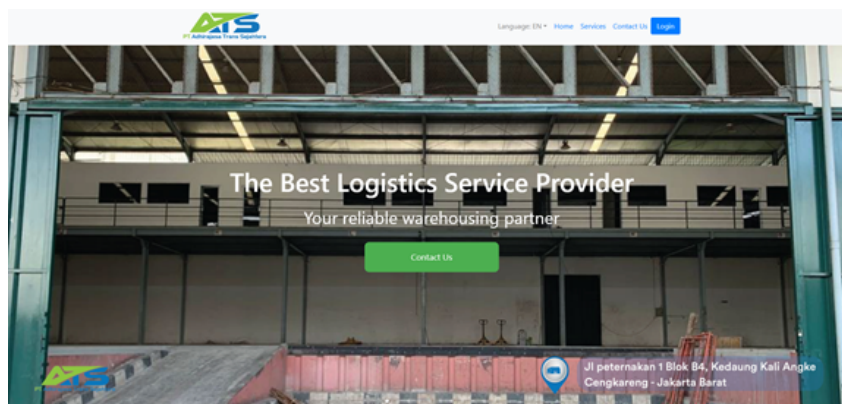

Technology Stack

- React Native Web
- Node.js
- Express.js
- MySQL
- Redis
- AWS Cloud

Business Impact

- Strengthened the company's digital presence.
- Improved customer engagement and brand credibility.
- Provided a scalable foundation for future digital services.

7. ATS CRM & Logistics Management System

ATS CRM is a custom-developed CRM and Logistics Management System built for PT Adhirajasa Trans Sejahtera (ATS), a third-party logistics (3PL) company.

The platform was designed to streamline operational workflows by centralizing customer management, inventory control, logistics tracking, invoicing, and reporting processes into a single system.

Key Features

- Customer Relationship Management (CRM)
- Inventory Management
- Stock Monitoring
- Logistics Tracking
- Invoice Management
- Operational Reporting
- User Access Management

Responsibilities

- Requirements analysis and system planning.
- Backend and frontend development.
- Database design and optimization.
- Deployment and maintenance.
- Continuous system improvement.

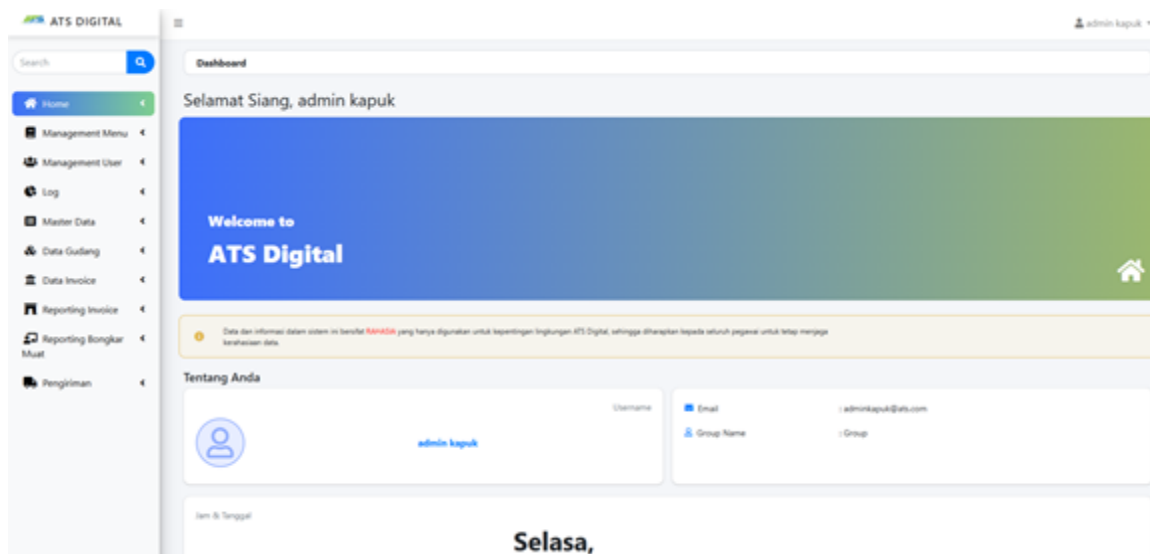

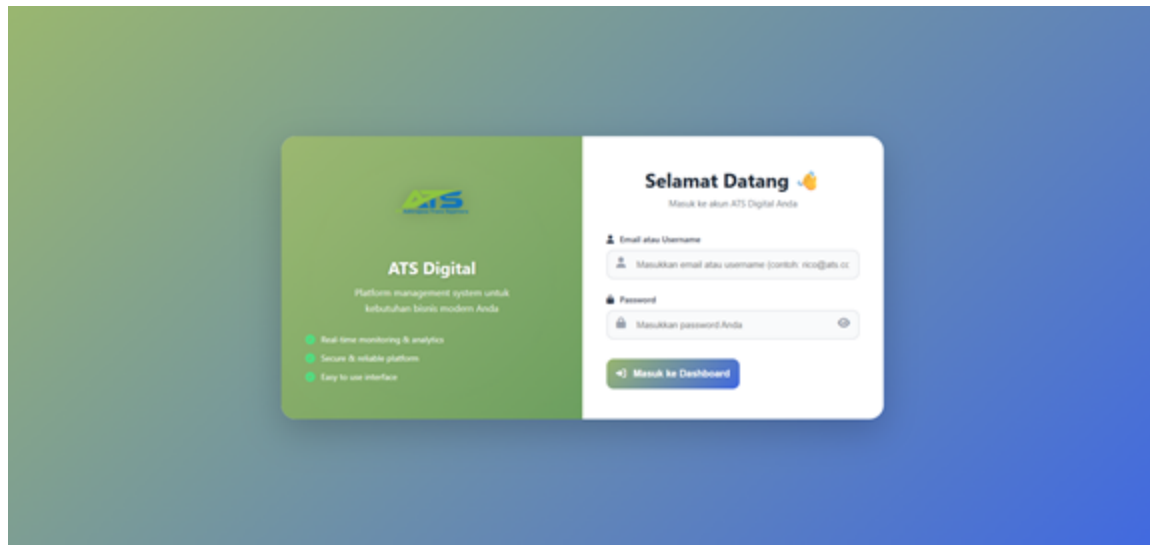

Technology Stack

- Laravel
- PHP
- MySQL
- JavaScript
- Bootstrap
- Linux Server

Business Impact

- Reduced manual administration tasks.
- Improved inventory visibility and control.
- Accelerated invoice generation and reporting processes.
- Increased operational efficiency across departments.

8. YOGI GROUP ERP & Management System

YOGI GROUP ERP is a custom-built enterprise management platform designed to digitalize and centralize the company's core business operations. The system is actively used in production and continues to evolve alongside the organization's operational needs.

The platform integrates financial management, inventory tracking, payroll processing, employee cash advances, and operational reporting into a single centralized ecosystem.

Key Features

- Financial Management
- Inventory Management
- Payroll Management
- Employee Cash Advance Management
- Goods Inbound & Outbound Tracking
- Reporting Dashboard
- Audit Trail System
- Role & Permission Management

Responsibilities

- Business process analysis and system planning.
- Database architecture and system design.
- Fullstack application development.
- API development and integration.
- Server deployment and maintenance.
- Production support and feature enhancement.

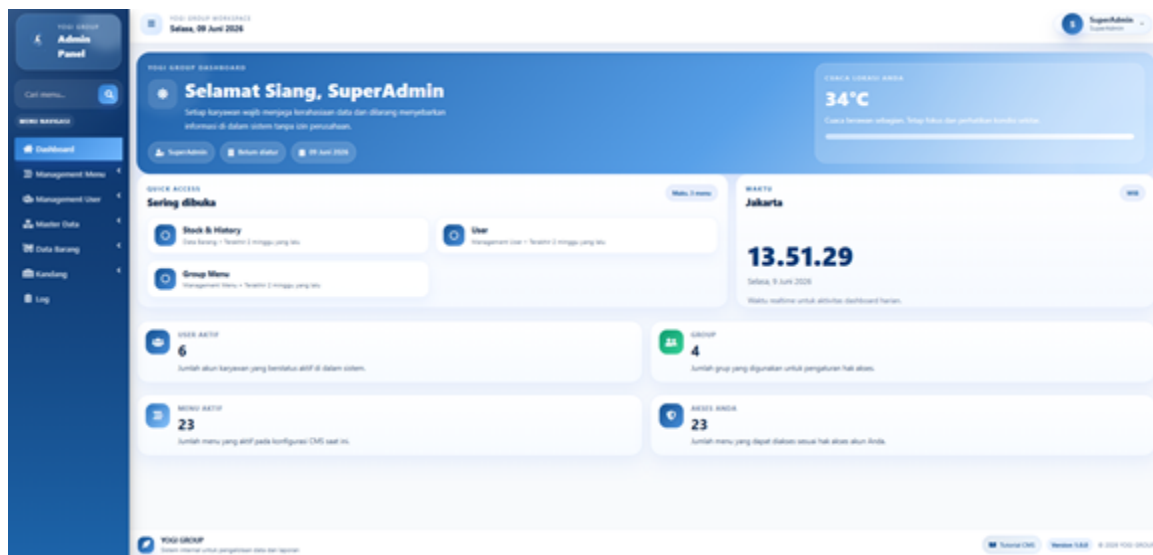

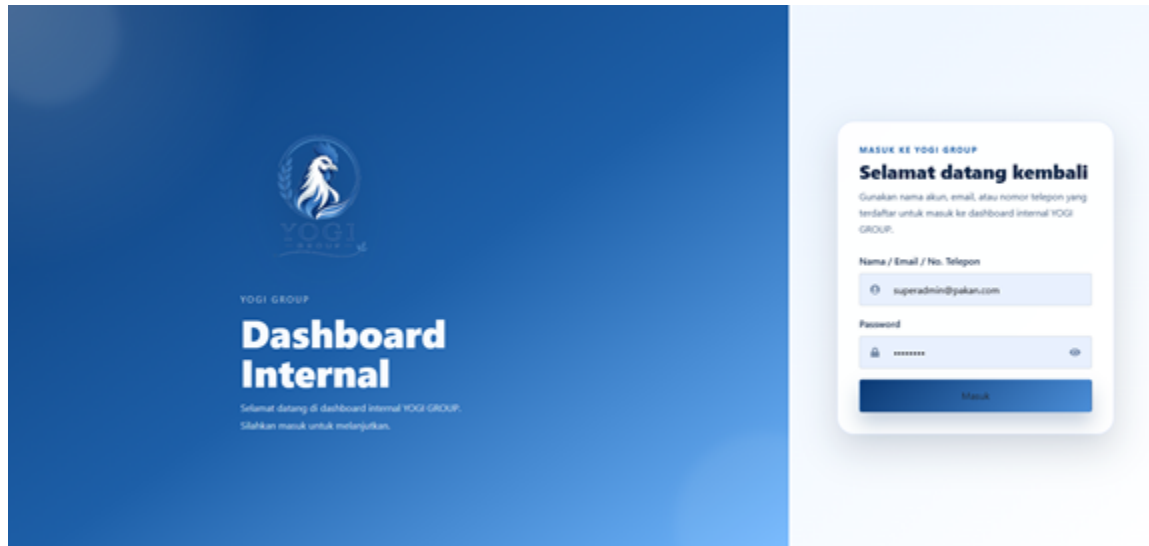

Technology Stack

- Laravel
- PHP
- MySQL
- JavaScript
- Bootstrap
- Ubuntu Server
- Nginx

Business Impact

- Eliminated manual operational processes.
- Improved accuracy of financial and inventory records.
- Increased productivity through process automation.
- Centralized company-wide operational data.
